The *ethos* of the Myne

Sustainability and respect for the environment

Narwhal cheese ?

“if we can make *narwhal cheese* we are one step closer to making *unicorn cheese* !”

Conclusion

This moral fragmentation is associated with a heterogeneous arrangement of different currents often opposed in terms of moral values.

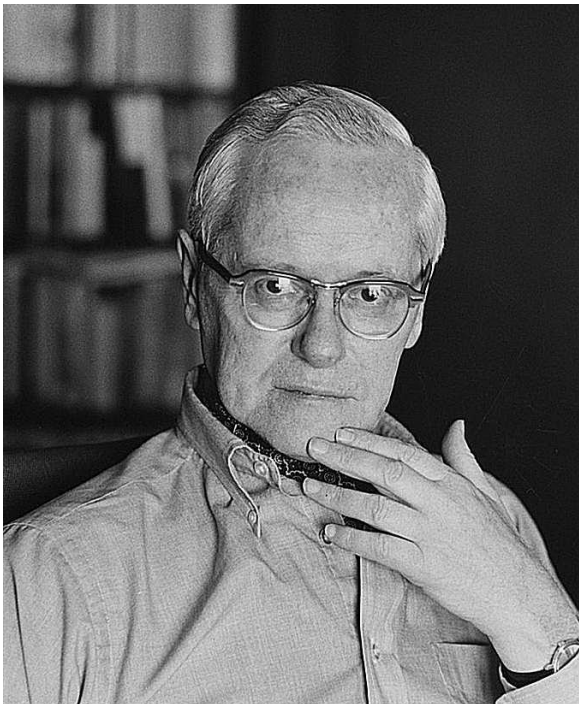

Conclusion

Citizen laboratories could play this dual role of ethical and scientific reflection but also social learning through the reappropriation of techniques and scientific knowledge.

Conclusion

The *ethos* of science according to Merton would therefore be resurging within these spaces with perennial and effective values.

Thank you for your attention !
